Sprint 7 Retro

Previous sprint Action Plan

For the last sprint 4/16 - 5/06 have everyone meet p atleast twice so that we can all work together promoting better collaboration as we complete the end of the project. We will plan and send out these two dates in the chat. This is in hopes of finishing off the project strong with everyone on the same page of what to do as we near the end.

Joshua Reyes

What went well?

How did this project impact you?
Please list out any positive results below.

Team is finally picking up how the codebase works and finishing off their features.h

Joshua Reyes

We started coordinating and explaining to each more on how the AuthZ and AuthN middleware functions work. Also, most of the features from CraftVerify got done before the sprint.

Kihambo

We are now on the same page for what each new thing added to the project actually does.

Jason

I made a lot of progress with my feature and got it working, though its not production ready yet

diego

I was able to create the InventoryStockController, Service, and DAO for the back-end project, and the InventoryStockView.js, InventoryStockView.html, and InventoryStockView.css

Khuong Nguyen

Successfully resolved my pagination issue using the approach discussed with professor

parth.thanki01

We have more member stays on office hours. Get to understand our design better.

An Nguyen

What problems did we face?

What needs improvement?
Please list out any problems you encountered during this project.

Problems with integration features into the codebase

Joshua Reyes

Communication on when we expect tasks to be completed as a group could be improved.

Jason

I need to fix the InventoryStock to get userhash from the username of the Authenticated User. Create CraftReceipt Data Table to use for FinancialProgressReport service. Implement FinancialProgressReport service. Implement Product Editing, and item/ product Deletion.

Khuong Nguyen

I had a really hard time building my code every time i opened the project. VS Codealways returned an error that said "user-mapped section open," and it really affected my progress and what I wanted to contribute towards the project. On top of that, I came down with a bad fever in the last week of the Sprint.

Kihambo

Through my code review i found out that our backend had a lot of issues that need to be ironed out

diego

Unsure of how to correctly implement the view change for users as suggested by my professor's method for enhancing the complexity of my price range sorting feature.

parth.thanki01

The CraftVerify front end for my part is still not done.
We are missing KPI and testing.

An Nguyen

Learnings & action items

What will your team do next?
Please outline next steps for the team to action moving forward

To fix the problem of integrating our code into the codebase we should set strict guidelines which shall be enforced for git/ merging and adding code in. Every pull request must follow these rules til the remainder of our project 5/10.

1. Every branch is created using developer as the base. and will be merged back into developer never main.
2. Before creating request, branch must be updated with latest version of developer.
3. Code must be tested and have test-cases added for the code/ functionality added.
4. All pull requests must be approved by Team lead or scrum master.

Joshua Reyes

I will implement the changes in my inventory stock service by 04/29/2024, complete the first implementation for both FinancialProgressReport Service(FrontEnd: FinancialProgressReportView.hmtl, FinancialProgressReport.js, FinancialProgressReport.css; BackEnd: FinancialProgressReportController, FinancialProgressReportService, FinancialProgressReportDAO) by 05/02/2024

Khuong Nguyen

At this point, we need to report to Vong about what our decision is as a team about how to go about the grading of this project

Kihambo

We need to fix a lot of backend issues like our naming conventions and database calls

diego

During standup, write a reminder on the expected dates we want certain tasks to be completed.

Jason

Learn about dynamic view model. Implement a dynamic view model with back end triggers and conditional front end rendering for responsive and customized price range sorting.

parth.thanki01

I will finish my feature front end and back end by 04/28/24 night.
Will start testing and ask Jason how to implement KPI on our front end on 04/29/24.
Start hosting the project on aws by 03/5/24 after everyone is done with the feature.
