Sprint 6 Retro

Previous sprint Action Plan

By end of upcoming sprint(4/15) complete 4 code reviews for the last 4 stand-ups of the sprint, ensuring every team members supposed work. We will document each review and save them in the sprint folder for team members and client to view. This is in hopes of improving productivity and quality of wok while promoting transparency between all members.

Joshua Reyes

What went well?

How did this project impact you?
Please list out any positive results below.

Some members have done better to reach ot for help and are now understanding how to actually implemet their work into the code

Joshua Reyes

More people managed to show up for more stand-up meetings and ask each other questions. Also, we all have a better understanding of what's expected during a code review.

Kihambo

I think we have done better at communicating on what people have completed

Jason

the work checks have been good for seeing how everyone is doing and how we're all approaching the project

diego

We discuss our lld's and problems with professor which helps us a lot to understand the design of our individual features.

parth.thanki01

We get better feedback from code review.
More members attended to office hours for LLD design.

An Nguyen

We communicate with each other more frequently to check each other works and help of necessary. More member of the team joined in asking for feedback in class.

Khuong Nguyen

What problems did we face?

What needs improvement?
Please list out any problems you encountered during this project.

Some members have tendency to slack and not care about deadlines

Joshua Reyes

Being on the same page in terms of how authentication and authorization are coded out.

Kihambo

I think sometimes the team struggles at meet together for a standup.

Jason

We had some misunderstandings about how the our code needs to be structured

diego

Asking more questions related to the problem to professor

parth.thanki01

Some of our problems exposed in code review. We need to change the name of FE project, disable swagger on BE, fix the authN, authZ to check signature first, focus on LLD design, having automated test before code review.

An Nguyen

We need to work on our individual faster, prepare for code reviews, and fix the code base on professor feedback. My calculation for the hours it need to fix the AuthN and AuthZ code is incorrect, so I need to estimate my work hours better.

Khuong Nguyen

Learnings & action items

What will your team do next?
Please outline next steps for the team to action moving forward

For the last sprint 4/16 - 5/06 have everyone meet p atleast twice so that we can all work together promoting better collaboration as we complete the end of the project. We will plan and send out these two dates in the chat. This is in hopes of finishing off the project strong with everyone on the same page of what to do as we near the end.

Joshua Reyes

Spend more time together asking each other about how different programs work and how anything functions in general.

Kihambo

Type anything, @mention anyone

Joshua Reyes

Either figure out a better schedule or even type out a conversation over the course of the day so the team has a better idea during standups.

Jason

Implementing the ideas that professor told us in the discussion.

parth.thanki01

We should attend to every office hours for more detail feedback, share the designs together for better understanding of our whole product.

An Nguyen

I need to work faster on designing my LLD and ask for feedback to implement the codes based on the LLD as fast as possible. I will try to complete all of my LLD before Saturday April 20, 2024 to implement the code for my features base on their LLD. We also need to communicate better and ask each other question to understand the product better.

Khuong Nguyen
