Work Check

Code	Color
Warning - Documenting problem as initial warning	
Action - team discussion for further action taken to fix problem	

Reviewee	Reviewer	Work in standup	Actual work done
Jason	Julie, Khuong	Working on his feature all coding front and back plus the test cases and documentation	Had everything done already by his code review and has been merged into the branch so he was ahead of schedule
Diego	Julie, Khuong	Worked on updating all the backend test cases had 2 left	He had all the testcases running and working and was currently working on the ones he had errors with just like he said
Shane	Julie, Khuong	Working on his feature supposed got his code and documentation done except for controller and getting it into the codebase	All work he said was done was done. Falling a little behind and should have finished but has had personal things come up this sprint which he has properly documented with the team.
Kihambo	Julie, Khuong	Only has the backend completed in standup	Has a good amount of drafted code but is still not thorough

		documentation along with research for the feature.	enough to add to the frontend. Still needs to work out the controller and properly coding the frontend. Has had a 3 week sprint just to work on his feature so this will be documented as lack of work/ contribution as a warning for future reference if issue persists.
Parth	Julie, Khuong	Said he got the codebase onto aws and fixed controllers and working on fixing token implementation	AWS is now completely on aws like he said and has made changes to codebase and has them pushed to the repo to verify his work. Not done still drafting most of them but that matches with standup.
Julie	Khuong, Parth	Making new datatables, modify brd and tempo tool feature frontend	Databases already used and brd on the main branch, demo showed he implemented the feature already in the codebase working just need to add the backend for logging.
An	Julie, Khuong	Supposed working on cors fixes and working on fixing aws with parth and authn and authz	AWS is now online and has a branch showing his draft for authn and authz and cors. Had initially completed cors earlier so it has taken up his time.
Khuong	Julie Parth	Said he removed warning from code and fixing brd along with trying to help with access token	Warnings have been removed in our codebase like he documented and has a branch with his current draft of new token fixes. Not the first fix so it matches up.
